

Installation Guide

1. Download the zip file from the Google Drive link provided.
2. Navigate to the 'Build' folder.
3. Open the Xcode project file, make sure you have the latest version of Xcode installed.
4. On the left side of the user interface, in the list column, click on the file 'Unity-iPhone'.
5. Click on the 'Signing and Capabilities' section:
 - i. Check the 'Automatically manage signing' if it is not already checked.
 - ii. Select your team from the dropdown menu.
 - iii. Copy and paste 'com.SP-Productions.DartAdventures' in the Bundle Identifier section.
6. Connect your iPhone to your system
7. Select your device from the list in the Devices and Simulators window in Xcode.
8. Click to run to initiate the process on your iPhone. You might have to login through your system's password before the app runs in your iPhone.
9. To allow the application to run in your device:
 - i. Go to Settings
 - ii. Click on 'General' and then open 'VPN and Device Management'
 - iii. Click on 'Trust Developer'
10. The application is ready to run.

How to use the application:

- The application requires camera access to function, on opening the app you will get a prompt to all the camera access.
- The app will first scan a vertical area as shown and then show a placement indicator:

- This placement indicator helps us in locating and placing the dartboard. Tap on the screen after you find a suitable location. This shall place the dartboard and a dart shall appear as well.

- To launch the dart to the dartboard, tap on the rear end of the dart. This enables a force to push the dart forward. Aim accordingly and launch the dart .
